1. Introduction

Data is the lifeblood of a modern enterprise. It is what drives the business, helps them to know their customers and how to serve them, and it is what drives the business forward. Data is also the lifeblood of the modern IT organization, and it is the job of IT to make data available to the business in a way that is secure, cost-effective, and performant. Data is also the lifeblood of the modern IT vendor, and it is the job of the vendor community to make data available to the IT organization in a way that is secure, cost-effective, and performant.

Secure and affordable data access is increasingly complex, however, and between data silos and hybrid and multi-cloud environments, it is a challenge for IT to make data available to the business in a way that is secure, cost-effective, and performant. This is where the vendor community comes in
